

# Robustní odhad vícerozměrného modelu lineární regrese

Robust 2010

Petr Jonáš  
2. února 2010

$$y_t = x_t' \beta + u_t, t = 1, \dots, T$$

$$y_t = x_t' \beta + u_t, t = 1, \dots, T$$

$$Y_t = B' X_t + U_t, t = 1, \dots, T$$

$$\hat{\beta}_{LWS}^{T,w} := \arg \min_{\beta \in \mathbb{R}} \sum_{t=1}^T w\left(\frac{t-1}{T}\right) r_{(t)}^2(\beta),$$

kde  $r_t^2(\beta) = (y_t - x_t' \beta)^2$ .

$$\hat{\beta}_{LWS}^{T,w} := \arg \min_{\beta \in \mathbb{R}} \sum_{t=1}^T w\left(\frac{t-1}{T}\right) r_{(t)}^2(\beta),$$

kde  $r_t^2(\beta) = (y_t - x_t' \beta)^2$ .

$$\hat{B}_{MLWS}^{T,w} = \arg \min_{B, \Sigma; |\Sigma|=1} \sum_{t=1}^T w\left(\frac{t-1}{T}\right) d_{(t)}^2(B, \Sigma)$$

$$d_t(B, \Sigma) = ((Y_t - B' X_t)' \Sigma^{-1} (Y_t - B' X_t))^{1/2}$$

Děkuji za pozornost!
