

Konvergenca integrala $\int_1^{\infty} x^{\alpha} (\cos(x^{\alpha})) \cos^{\beta} \frac{1}{x} dx$
 $\alpha, \beta, \gamma \in \mathbb{R}$:

- Integral je spojaj na $(1, \infty) \Rightarrow$ staci' v'p'elci' $x \rightarrow \infty$
- $\lim_{x \rightarrow \infty} \cos^{\beta} \frac{1}{x} = 1 \in (0, \infty)$ a funkcija $x \mapsto x^{\alpha}$ je monotonna na $(1, \infty)$ (deležina' pro $\beta < 0$, konstanta' pro $\beta = 0$, raste' pro $\beta > 0$)

\Rightarrow dlo symetričn' merz' Aselma k'z'lo'v'ia integral z' zad'ni'm konvergencija (absolutn'), pri'ne' kaj' konvergencija (absolutn') integrala $\int_1^{\infty} x^{\alpha} \cos(x^{\alpha}) dx$

~~procedemo substitucija: $y = x^{\alpha}$~~
 • p'rd $\alpha \leq 0$ ip'z $\lim_{x \rightarrow \infty} \frac{x^{\alpha} \cos(x^{\alpha})}{x^{\alpha}} = \begin{cases} 1 & \alpha < 0 \\ \cos 1 & \alpha = 1 \end{cases}$

Tog' integral konv. \Leftrightarrow konv. $\int_1^{\infty} x^{\alpha} dx \Leftrightarrow \alpha < -1$
 (man' se funkcija z'edna' t' $k = Ak$)

• $\alpha > 0 \Rightarrow$ procedemo substitucija: $y = x^{\alpha}, x = y^{1/\alpha}, y \in (1, \infty)$

$$\frac{dx}{dy} = \frac{1}{\alpha} y^{\frac{1}{\alpha}-1} > 0$$

$$\text{Tog' } \int_1^{\infty} x^{\alpha} \cos(x^{\alpha}) dx = \int_1^{\infty} y^{\frac{\alpha}{\alpha}} \cdot \frac{1}{\alpha} y^{\frac{1}{\alpha}-1} \cos(y) dy$$

Z'ev'ic'ar' u'ine, z'e tento integral

- konvergencija absolutn' $\Leftrightarrow \frac{\alpha}{\alpha} + \frac{1}{\alpha} - 1 < -1$
- konv. neabsolutn' $\Leftrightarrow \frac{\alpha}{\alpha} + \frac{1}{\alpha} - 1 \in (-1, 0)$
- divergencija $\Leftrightarrow \frac{\alpha}{\alpha} + \frac{1}{\alpha} - 1 \geq 0$

Prvi' mo'znost ... $\alpha < -1$

Drugi' mo'znost $\alpha \in (-1, -1+\alpha)$

Tre'ci' mo'znost $\alpha \geq -1+\alpha$

Z'g'neri: KA, p'rd $\alpha < -1$, KNA, p'rd $\alpha > 0, \alpha \in (-1, -1+\alpha)$, D, in'ad
